Key User Features

- Every problem is an opportunity...
  - Problem/Challenge people have
    - Not knowing what they want to listen to based off of mood
  - Solution your project provides to users
    - Give a very easy interface and intuitive way to select multiple playlists and songs
- Value Proposition
  - What features does your project have?
    - Clean, simple, minimal interface
    - Can play directly from interface
  - Advantages over competition
    - Do not have to sign in, do not have to join Spotify's environment, any platform with a web browser, we have emojis to really sum up your complex feelings into one place

About the Technology Stack

- Front-end technologies
  - Custom grid.css format, jQuery
- Server technologies
  - Spotify API servers
- Data Persistence
  - N/A
- Hosting/SaaS
  - Github Pages
- Development Environment
  - Visual Studio Code, Atom, Mozilla Firefox, Google Chrome, Postman

Demo

Code

Lessons Learned

- Process, Planning, Development, Coordination
  - JavaScript syntax, task delegation and working with partner to merge tasks together, changing initial goals for more realistic goals to achieve in time frame
- Development and Technology
  - Pros: Editors make it easy to look for mistake
  - Cons: Slight differences in browser response to errors, Spotify API is useful but also tricky, some documentation is deprecated and not updated
- Next Steps
  - Additional features?
    - Pulling in the time data (milliseconds)
    - Filter out playlists without images
